

EP. 7 CAL A BUN GAA

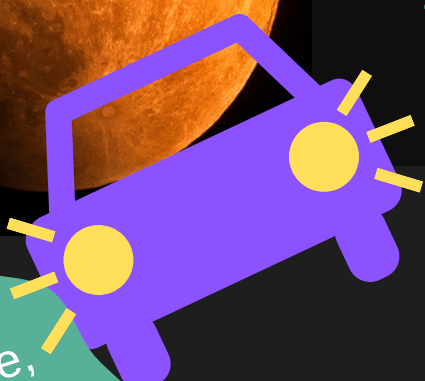

Super Blood Wolf Moon

January 20-21, 2019

The moon is drifting away from the earth at about 3.8 centimeters per year

In 50 billion years, it will take about 47 days for the moon to orbit the Earth instead of 27.3

The moon gets hit with ~2,800 kilograms of meteor material every day

When the moon is gone, will Tesla's space car headlights become our future moon?

TYPES OF MOONS

REGULAR MOON

Our good friend that we see everyday.

SUPER MOON

The full moon is all "buddy buddy" with the Earth and is at it's closest point in it's elliptical orbit

WOLF MOON

Native Americans and Colonial Europeans called the January Full Moon this because wolves would in the region would start howling from hunger in the winter.

PODCAST SERVICE ANNOUNCEMENT (PSA) #1

Wear sunglasses. And still don't look at the sun.

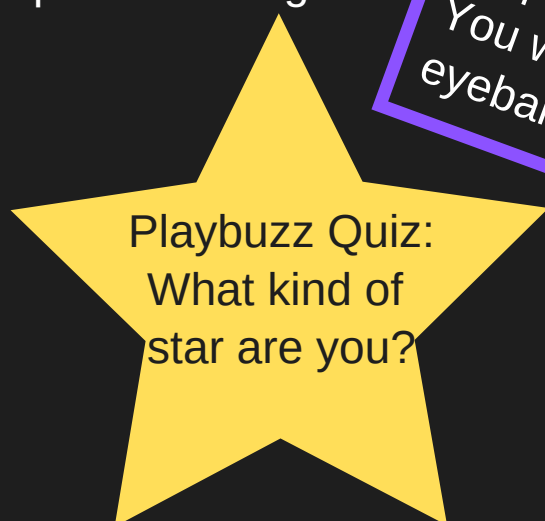

New Zealand is the best place to stargaze

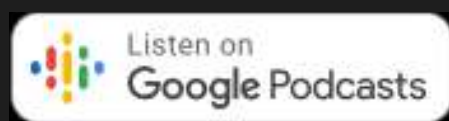

PODCAST SERVICE ANNOUNCEMENT (PSA) #2

Solar eclipse or lunar eclipse- look at the moon. You won't burn your eyeballs out.

MYTH: THERE IS NO DARK SIDE OF THE MOON SO GO HAVE SOME COOKIES!

Playbuzz Quiz: What kind of star are you?
